Comment Alert

100

Someone built a basic comment system... but forgot to sanitize user input.

Can you make a **comment** it pop? 🎈

Submit the flag in this format: `ctfcw{answer}`

Flag

Submit

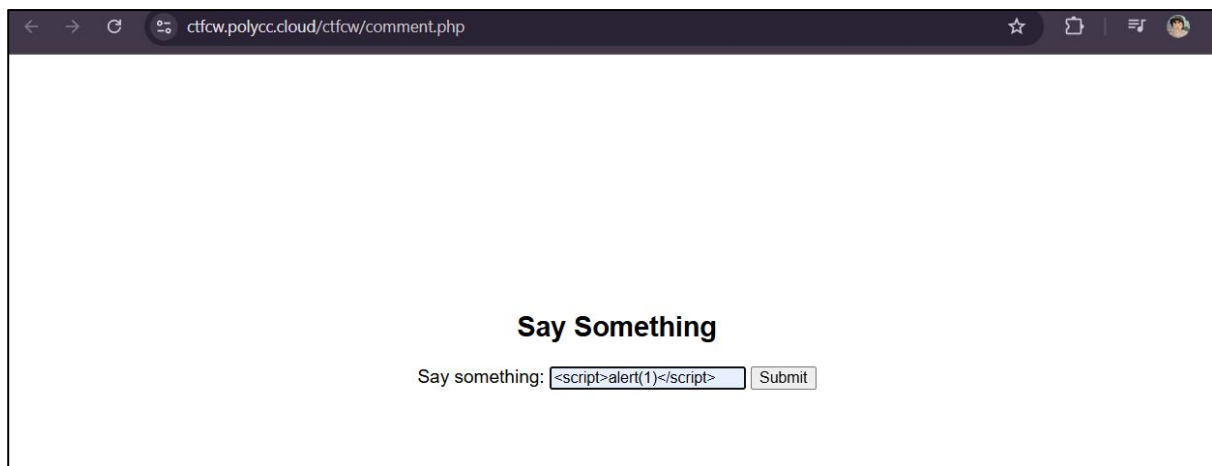

The question ask for pop up the comment. I just input the script of the html alert that I get from the polycc ctf workshop trainer. The script is basic Javascript to executed in the web page.

ctfcw.polycc.cloud/ctfcw/comment.php

Say Something

Say something:

The command : `<script>alert(1)</script>`

A screenshot of a web browser window. The address bar shows the URL `ctfcw.polycc.cloud/ctfcw/comment.php`. The page content is centered and features the heading **Say Something**. Below the heading is a form with the label "Say something:" followed by a text input field containing the payload `<script>alert(1)</script>` and a "Submit" button.

And we get the flag.

A screenshot of the same web browser window after the form submission. The address bar now includes a query parameter: `ctfcw.polycc.cloud/ctfcw/comment.php?msg=<script>alert%281%29<%2Fscript>`. The page content has changed to display the flag `ctfcw{popup_trigger}` in the center. Below the flag, it says "You said:" followed by the heading **Say Something**. At the bottom, there is a "Say something:" label, an empty text input field, and a "Submit" button.

Flag : `ctfcw{popup_trigger}`

Coffee time with me

Coffee time with me

50

Since you been stuck with me, why not have some coffee?
had a question for you..what a type of coffee most widely
produced? I give you a hint 'BRAZIL' as a keyword to find
the answer?

oh you need a hint: It is standard vigenere cipher, go on
find it, it won't bite you.. Don't you dare to answer
starbuck, zus coffee and gigi coffee, you will offended
me!!!!

Submit the flag in this format: ctfcw{answer}

[Download BRAZIL.txt...](#)

The question give hint such as BRAZIL and standard vigenere cipher. After see this hint we straight to the cryptii website and choose decode the vigenere cipher variant. Then we swap the key to the BRAZIL.

The screenshot shows the cryptii.com/vigenere-cipher website. The interface has three main sections: Ciphertext, Vigenère cipher, and Plaintext. The Ciphertext section contains the text 'dkfbe{LsrbhkL_Dffemp_cvam}'. The Vigenère cipher section is highlighted with a red box and contains the following fields: VARIANT (Standard Vigenère cipher), KEY (BRAZIL), and KEY MODE (Repeat). The Plaintext section contains the text 'ctfcw{Arabica_Coffee_bean}'. The browser address bar shows 'cryptii.com/pipes/vigenere-cipher'.

Flag : ctfcw{Arabica_Coffee_bean}

Grandfather's Memory

Grandfather's Memory

50

While rummaging through your grandfather's attic, you stumble upon an old, dust-covered box filled with his belongings. Among them, you find a faded envelope containing an old letter and a photograph that has yellowed with age. The photo is of you and your grandfather sitting at the old piano in the living room, both of you smiling.

Submit the flag in this format: ctfcw{answer}

 letter.txt

For this question, we download the .txt file and open it to view the content. It seem the encrypted message.

Then, we go to cipher identifier website to recognize the type of encrypted message. The result shown that the ROT Cipher and Caesar Cipher is the top Dcode analyzer.

The screenshot shows the dcode.fr/cipher-identifier website. On the left, there's a search bar with the text "e.g. type 'random'". Below it, a list of results is shown, with "ROT Cipher" and "Caesar Cipher" at the top. On the right, there's a section titled "ENCRYPTED MESSAGE IDENTIFIER" with a sample ciphertext and an "ANALYZE" button.

We choose the ROT cipher because the decrypt is full than the caesar cipher. Insert the encoded message to be decode and the result is very long.

The screenshot shows the dcode.fr/rot-cipher website. On the left, there's a search bar with the text "e.g. type 'caesar'". Below it, a list of results is shown, with "ROT Cipher" at the top. On the right, there's a section titled "ROT CIPHER DECODER" with a sample ciphertext and an "ANALYZE" button. The "AUTOMATIC DECRYPTION (BRUTE-FORCE)" section shows the "PLAINTEXT LANGUAGE" set to "English" and the "DECRYPT" button. The "CUSTOM DECRYPTION" section shows the "ROTATION TO USE ROT-N, N=" set to "13".

After read full the letter we found the flag is appeared at almost bottom part.

The screenshot shows the website dcode.fr/rot-cipher. On the left, a story is displayed. A red box highlights the text: `ctfcw{hidden_CaesarCipher}.`. On the right, the cipher tool interface is visible. It includes a 'PLAIN TEXT TO ROTATE' field with 'dCode ROT', a 'ROTATION TO USE ROT-N, N=' dropdown set to '13', and a 'ROTATION TO USE' section with several radio button options. The first option, 'ABCDEFGHIJKLMNOPQRSTUVWXYZ (ROT13 / CAESAR)', is selected. Below these are two 'CUSTOM ALPHABET' fields. The first is set to '1234567890QWERTYUIOPASDFGHJKLZXCVBNM' and the second to 'qwertyuiopasdfghjklzxcvbnm1234567890QWERTYUIOPASDF...'. An 'ENCRYPT' button is present. At the bottom right, a search bar contains the text '1. ROT13 cipher' and '2. Autokey Cipher'.

Flag : `ctfcw{hidden_CaesarCipher}.`

Cipher No Hint

decode it, no hint

Submit the flag in this format: ctfcw{answer}

Download cipher.txt

Flag

Submit

File Edit View

xguxd{yzhrx_pml dovwtv_xibkg1}

The question told that no hint just decode the encode flag. The content of this flag is like this it mean it was the encoded message. At this point, we just go through the cryptii website to decode the flag. We don't find anything at the rot cipher.

dcode.fr/rot-cipher

ROT CIPHER
Cryptography > Substitution Cipher > ROT Cipher

ROT CIPHER DECODER

★ ROTED TEXT (?)

So we use crptii to solve this problem, at this point we trial and error the cipher and change the slope and intercept one by one to find the match ctfcw flag and we got this. We found that the encode using the Affine Cipher.

Morse code

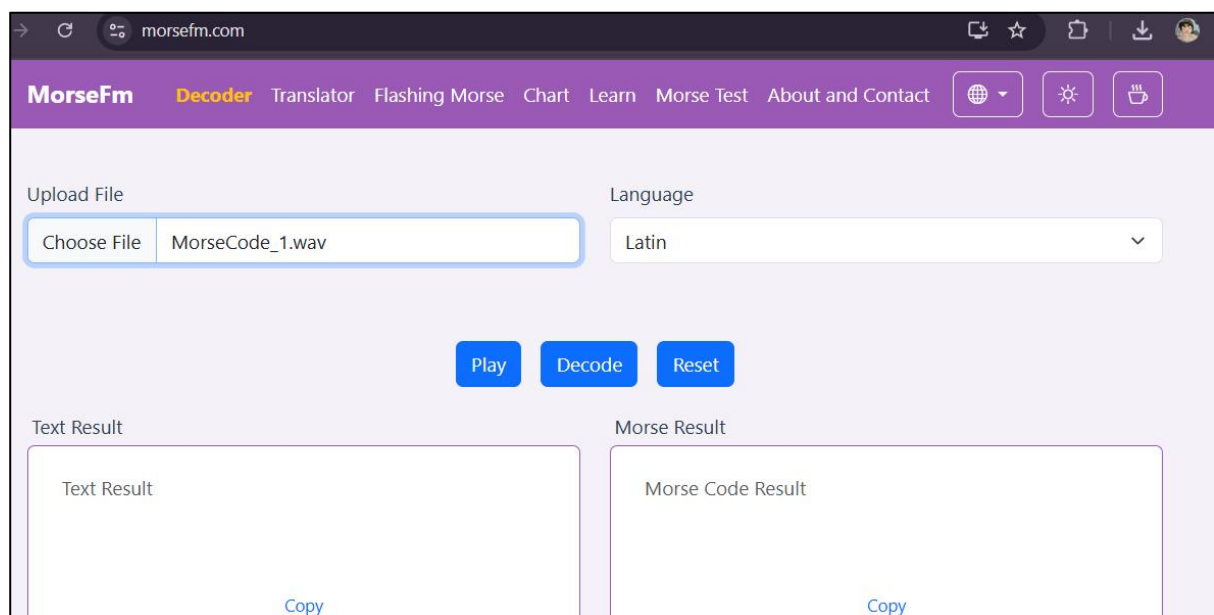

100

During Korean War March 1952, USS Winconsin (BB-64) operate coast of Korea receives hits from biligerent North Korean army 155mm artillery, minor damage injuring 3 United States sailors. In response to this attack, the crew of the USS Wisconsin, fueled by anger and a desire for retribution, returned fire with all nine of their Mark 7 16-inch guns. The firepower of these guns was enormous, each capable of firing a 2,700-pound armor-piercing shell over 32 km. This salvo obliterated the North Korean gun battery that had hit them. An escort ship USS Duncan had signal the message on morse code after the salvo.

Analyze morse code audio file and submit the flag in this format: `ctfcw{answer}`

 MorseCod...

For this question, we don't find any important information on the statement but get hint from the last sentences "Analyze morse code audio file and submit the flag in this format: `ctfcw{answer}`". So we just go to website that provide morse code converter. The website we use is morsefm and we put the downloaded file to the upload file space.

The screenshot shows the morsefm.com website. The navigation bar includes links for MorseFm, Decoder, Translator, Flashing Morse, Chart, Learn, Morse Test, and About and Contact. The main interface has an 'Upload File' section with a 'Choose File' button and a text input field containing 'MorseCode_1.wav'. To the right is a 'Language' dropdown menu set to 'Latin'. Below these are three buttons: 'Play', 'Decode', and 'Reset'. At the bottom, there are two result boxes: 'Text Result' and 'Morse Result', each with a 'Copy' button.

After decode, we got the text converted and morse.
